

SWRB_MT-3W Series

3W, WIDE INPUT, ISOLATED & REGULATED SINGLE OUTPUT, DC-DC CONVERTER

PART NUMBER SYSTEM

SWRB2405MT-3W

FEATURES

- Efficiency up to 83%
- 2:1 wide input voltage range
- Operating Temperature range: -40 ~ +85°C
- 1.5KVDC isolation
- Ultra-Miniature, SMD Package
- No Power derating ($\leq 85^{\circ}\text{C}$)
- Short Circuit Protection (automatic recovery)
- Low no-load power
- External On/Off control

APPLICATION

The SWRB_MT-3W Series are specially designed for applications where a wide range input voltage power supplies are isolated from the input power supply in a distributed power supply system on a circuit board. For these DC-DC converters, You can reduce the design point of failure and save the development of micro power supply's manpower, material and time costs, also better ensure product quality stability, protect safety and reliability of the end of products.

These products apply to where:

- 1) Input voltage range $\leq 2:1$;
- 2) 1.5KVDC input and output isolation;
- 3) Regulated and low ripple noise is required.

TEST CONFIGURATIONS

Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor L_{in} and Capacitor C_{in} to simulate the source impedance.

DESIGN CONSIDERATIONS

1) Requirement on output load

To ensure this module can operate efficiently and reliably, during operation, the minimum output load could not be less than 5% of the full load, otherwise ripple may increase dramatically. If the actual output power is very small, please connect a resistor with proper resistance at the output end in parallel to increase the load, suppose to use the resistance of 5% rated power, or use our company's products with a lower rated output power.

2) Recommended circuit

All the SWRB_MT-3W Series have been tested according to the following recommended test circuit before leaving the factory (see Figure 6).

If you want to further decrease the input/output ripple, you can increase a capacitance-values properly or choose capacitors with low ESR. However, the capacitance of the output filter capacitor must be proper. If the capacitance is too big, a startup problem might arise. Provided the safe and reliable operation is ensured, the greatest capacitance of its filter capacitor must be less than the Max. Capacitive Load.

Recommended circuit refer to "EMC RECOMMENDED CIRCUIT".

(Figure 6)

3) CTRL Terminal

When open or high impedance, the converter works well. When this pin is 'high', the converter shut down. It should be note that the input current should be between 5-10mA, exceeding the maximum 20mA will cause permanent damage to the converter. The value of R can be derived as follows:

$$R = \frac{V_C - V_D - 1.0}{I_C} - 300$$

For detailed parameter, please refer to "EMC RECOMMENDED CIRCUIT".

4) Input current

When it is used in unregulated power supply, be sure that the fluctuating range of the power supply and the rippled voltage do not exceed the module standard. Input current of power supply should afford the flash startup current of this kind of DC/DC module (Figure 7).

General: $V_{in}=12V$ $I_p=675mA$
 $V_{in}=24V$ $I_p=320mA$
 $V_{in}=48V$ $I_p=160mA$

(Figure 7)

5) The modules can't be used in parallel or hot swap applications

Note:

1. Min. load shouldn't be less than 5%, otherwise ripple may be increased dramatically. If the product operates under min. load, it may not be guaranteed to meet all specifications listed. Operation under minimum load will not damage the converter.
2. All specifications measured at $T_a=25^{\circ}C$, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
3. In this datasheet, all test methods are based on our corporate standards.
4. All characteristics are for listed models, and non-standard models may perform differently. Please contact our technical support for more details.
5. Please contact our technical support for any specific requirement.
6. Specifications of this product are subject to changes without prior notice.
